

THE HEALTH OF RESIDENTS & THE ECONOMY IN RURAL OHIO

The Better Care Reconciliation Act (BCRA): Not the Answer for Ohio's Rural Counties

Introduction

According to data from the Office of Rural Health Policy, **50 of Ohio's 88 counties are rural**, accounting for more than twenty percent of the state's total population.^{1,2} In more than half of these rural counties, healthcare facilities rank as a top three employer.³ While rural counties in Ohio and across the country face unique challenges when it comes to the health of their residents and their economies, Ohio's rural communities are also some of the most creative when it comes to finding new, innovative ways to ensure access to care.

Investing in Ohio's rural residents produces healthier communities and fuels economic opportunity. Affordable health coverage not only helps individuals and families lead long, successful lives, it is also a major driving force behind good-paying jobs and economic activity in rural areas across the state.

The Better Care Reconciliation Act: Bad for Ohio

Unfortunately, the U.S. Senate Republican's recently released *Better Care Reconciliation Act (BCRA)* would cause health care costs to skyrocket and create significant barriers to accessing timely, affordable, high quality healthcare, while threatening jobs and related economic activity in Ohio's rural communities. The Chief Executive Officer of the National Rural Health Association, Alan Morgan, said it best: "In its current form, this bill is anti-rural."⁴

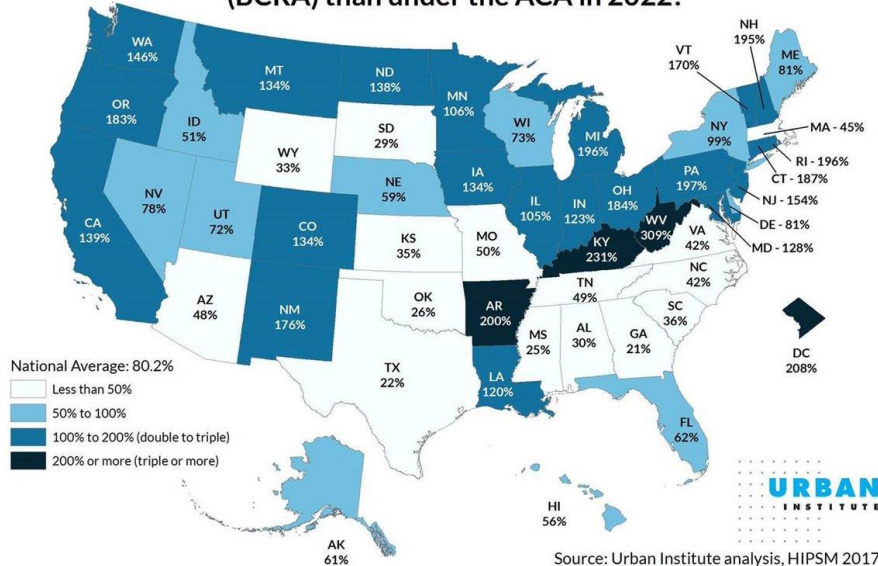

Ripping Coverage Away from Ohioans

Thanks to the Affordable Care Act (ACA) Ohio's rate of uninsured is at an all-time low of fifteen percent.⁵ The BCRA would decimate the progress local communities – and particularly rural communities – have made in getting more Ohioans insured. The non-partisan Congressional Budget Office (CBO) has estimated that under the BCRA, 22 million Americans who currently have health insurance will become uninsured by 2026.⁶ **Nearly one million Ohioans have gained health insurance coverage since passage of the ACA, yet more than one million Ohioans stand to lose coverage under the BCRA.**⁷

The BCRA would cut nearly \$800 billion over 10 years from the Medicaid program and weaken the private health insurance market in rural areas by significantly limiting premium assistance, ripping affordable health care from Ohioans living in rural communities.

- **One estimate found that passage of the BCRA would result in a 184 percent increase in Ohio's uninsured rate in 2022, with 152,000 more uninsured children and 970,000 more uninsured adults.⁸**

How much higher would the uninsured rate be under the Senate bill (BCRA) than under the ACA in 2022?

Source: Urban Institute analysis, HIPSIM 2017. The data show how much higher state uninsured rates would be under the Senate's Better Care Reconciliation Act (BCRA) than under the ACA in 2022. For example, West Virginia's nonelderly uninsured rate would be 309 percent higher under the BCRA than under the ACA, quadrupling from 5.0 percent to 20.3 percent. California's uninsured rate would be 139 percent higher, increasing from 9.0 percent to 21.4 percent. For more information on data and methods, see the full paper: www.urban.org/research/publication/state-state-coverage-and-government-spendingimplications-better-care-reconciliation-act

8

Reducing Care Options for Ohioans

Rural hospitals in Ohio provide access to quality care to millions of Ohioans close to home. From emergency services to inpatient and outpatient care, laboratory services, pharmacy services, nursing home care, and rehabilitation, rural providers help ensure timely diagnosis and delivery of services for individuals in rural communities. And because many rural communities are older and tend to have more chronic conditions than their urban counterparts, rural providers are especially critical in caring for Ohio's most vulnerable. The BCRA, which would cut nearly \$800 billion from Medicaid and cause additional instability in the individual insurance market, will hurt rural providers, and threaten access to care in rural communities.

Rural hospitals and other community providers are already struggling to keep their doors open. The BCRA would add an unsustainable amount of pressure on rural providers, hurting rural communities. Nationally, more than 673 rural hospitals, employing nearly 100,000 workers, are already at risk of closure.⁹

Significant cuts to Medicaid funding, as included in the BCRA, could force Ohio to pay providers less for services, restrict current benefits, and apply stricter eligibility criteria for patients. These cuts will impact rural communities the most, causing local hospitals to close, reducing choice for those in the community, and forcing individuals in rural areas to travel farther for necessary care or potentially forgo necessary care altogether.¹⁰

- **According to the Ohio Hospital Association, a quarter of Ohio hospitals would be at risk of closure if a plan like the BCRA became law.¹¹ Nearly all of the hospitals at risk of closure (22 percent) are rural hospitals.¹²**

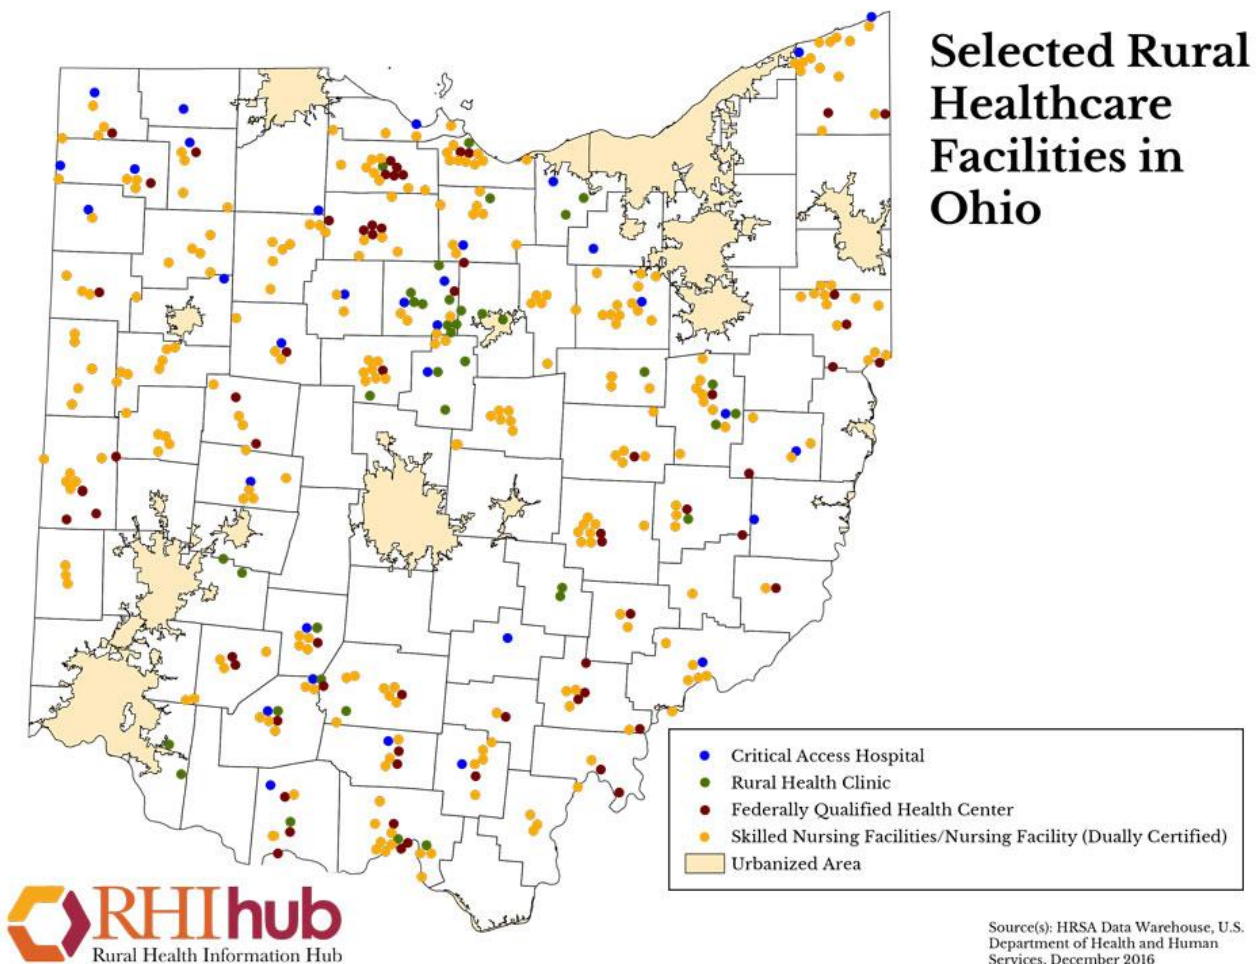

12

Eliminating Ohio Jobs

Health care and social service jobs are a major economic driver in many areas of Ohio, and especially across rural Ohio. More than 16 percent of all workers in Ohio's rural counties work in the health care sector.¹³ In 78 percent of Ohio's rural counties (39 of 50), a healthcare provider serves as a top five employer.³ The health care sector has also been the greatest source of job growth in recent years.¹⁴ Cuts to Medicaid will threaten the sustainability of rural healthcare facilities.

- **Experts estimate that passage of the BCRA would result in nearly one hundred thousand (98,800) Ohio jobs lost by 2026.¹⁵**

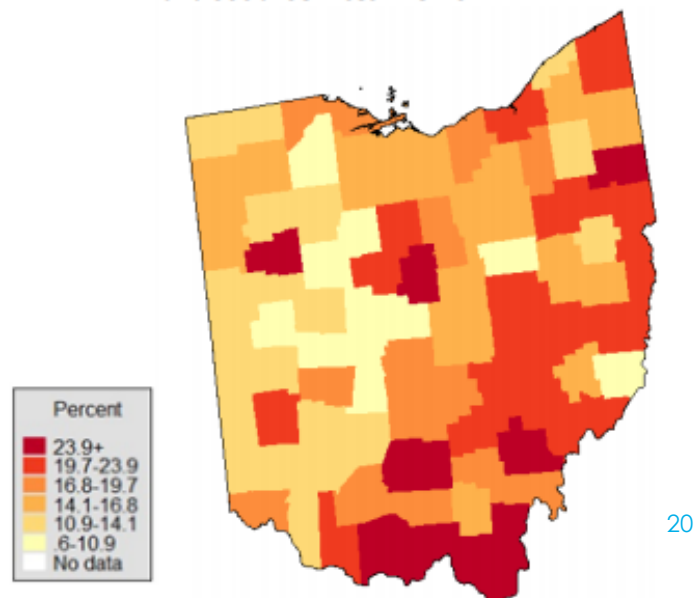

Rural Hospital Closures & Threats to Community Health Centers

Rural hospitals help ensure that families have access to needed health care services, as well as support good paying jobs and economic activity in the area. Medicaid is a critical source of revenue for rural hospitals, which on average have operating margins of less than one percent. The nearly \$800 billion in cuts to Medicaid funding under BCRA over 10 years and elimination of resources that help individuals and families afford insurance will jeopardize health care coverage and services for millions living in rural areas – including many vulnerable seniors – and will put the jobs and economic growth in at risk.

Ohio hospitals directly or indirectly employed more than 500,000 Ohioans in 2015.¹⁷ Across all rural counties in Ohio, hospitals employ 5.6 percent of all workers.¹³ In Ohio, Medicaid revenues and related funding make up 12 percent of all rural hospital revenues statewide.¹³ Likewise, Federally Qualified Health Centers (FQHCs), which serve all patients regardless of their ability to pay, rely heavily on Medicaid.¹⁸ Ohio has FQHC locations in 65 of Ohio's 88 counties, employing more than 3,800 Ohioans across the state. More than 57 percent of individuals who receive healthcare services through an FQHC in Ohio are insured by Medicaid.¹⁹

Coverage losses from the BCRA would result in decreased reimbursements for care received in the county at hospitals and community health centers, and threaten the availability of good-paying jobs and economic activity. **If the BCRA passes, more than 20 percent of Ohio's rural hospitals may have to close.¹²**

Percentage of Employment in Health Care
and Social Services in Ohio

Increasing Costs for Ohioans

According to the CBO, in addition to ripping coverage away from more than a million Ohioans, the BCRA would also cause premiums for some consumers to increase in 2018 by 15 to 20 percent.⁶ Rising premiums and out-of-pocket costs will make access to health care services, like cancer treatment, diabetes medication, and addiction treatment out of reach for many rural residents. Costs would go up disproportionately for Ohioans between the ages of 50 and 65, as they would be subjected to an additional age tax under the BCRA. The average premium for individuals in Ohio would go up by \$1,380 in 2020, and deductibles would also increase significantly.^{21,22}

- **According to the AARP, under the BCRA, a 60-year-old in Ohio with a yearly income of \$20,000 could pay up to \$4,440 more a year in premiums, and up to \$4,530 more a year in deductibles, coinsurance, and copayments in 2020. A 60-year-old in Ohio with a yearly income of \$45,000 could pay up to \$14,220 more each year in premiums in 2020.²³**

Premiums Would Increase for Older People Across Incomes Under Senate GOP Plan

Out-of-pocket silver plan premium for a 64-year-old, 2026

Note: Deductibles would be \$3,600 in all cases except for individual with income of \$26,500, where deductible would be \$800.

Threats to Seniors in Nursing Homes & Receiving Care in the Community

Long-term services and supports (LTSS) provided in nursing homes and in home and community-based settings help individuals with disabilities and older Ohioans live and age with dignity. **Medicaid is the largest single payer of LTSS costs, and covers approximately half of LTSS costs nationwide.**²⁵ A cut of nearly \$800 billion over 10 years to Medicaid, as proposed by the BCRA, could jeopardize the care seniors and individuals with disabilities receive, as well as reimbursements to providers of long-term services and supports.

Ohio's **960 nursing and residential care facilities** and more than **55,570 home health and direct service providers** supported over **222,000 Ohioans** during 2015.²⁶ More than 60 percent of Ohio's nursing home residents rely on Medicaid to cover the cost of their care,²⁷ and 55 percent of residents in Ohio nursing facilities have been diagnosed with a form of dementia. Cuts to Medicaid spending, the majority payer for these services, will result in an **average annual loss to Ohio nursing home facilities of nearly \$669,000 each.**²⁶ These cuts will result in limited services for patients and reduce staffing across facilities. Rural areas – where it is already challenging to attract a health care workforce – would be hit particularly hard.

Ohio's rural counties are aging rapidly. The BCRA disproportionately hurts older individuals, through cuts to nursing home coverage and an age tax on adults over the age of 50, causing premiums to increase in rural counties by significantly more than they do elsewhere in Ohio.²⁸

179,700 of Ohio's seniors get health care through Medicaid, including nursing home care and services that help them live at home.

That's **11%** of seniors in our state.

Elimination of Options for Adults with Intellectual Disabilities

Many adults with intellectual and developmental disabilities are able to live in the community with assistance. Medicaid helps to support these individuals with services related to daily living tasks, therapy, and respite services for family caregivers. In large part, Medicaid helps to support the provision of these services; **more than 74,700 Ohioans with intellectual and developmental disabilities receive services through Medicaid.**³⁰

In order for Ohioans who rely on Medicaid to continue to receive their current level of services under the BCRA, more than **1 out of every 5 current Medicaid beneficiaries in Ohio would have to give up their coverage entirely.**²³

Medicaid provides **383,000**
people with disabilities in Ohio
access to critical care that helps
them live independently.

That's **25%**
of people with
disabilities in
our state.

29

Cuts to Schools and School-Based Services for Children

School districts across all rural counties in Ohio receive Medicaid dollars to cover services associated with a child's special education plan, including occupational and physical therapy, and certain health-related services for eligible children, such as hearing and vision screenings. **The BCRA could cut up to \$12 million a year from Ohio schools**, putting pressure on already tight local budgets to fill in the gaps.

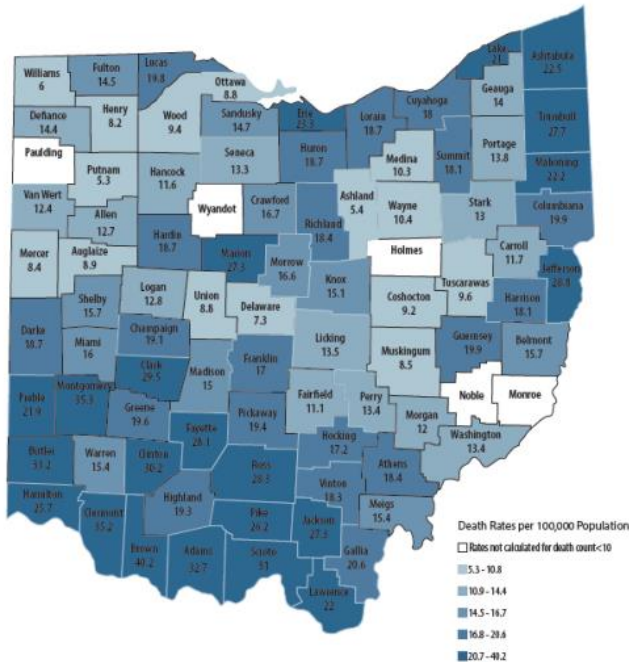

Cuts to Addiction Treatment and Substance Use Disorder Services

America is in the midst of an opioid addiction crisis, and Ohio is at the epicenter. **More than 16 percent of overdose deaths in Ohio take place in rural counties.**³¹ Ohio spent nearly \$1 billion dollars to fight the opioid epidemic last year alone, with **70 percent of this investment coming directly from Medicaid.** The BCRA would end Medicaid expansion, which allows thousands of Ohioans to get treatment, and replace it with just \$2 billion to address the opioid crisis in the entire country over 10 years. Experts have said even a \$45 billion investment will not work.³² Simply throwing money at this epidemic will not fix the problem – the money included in the BCRA is useless if Ohio does not have a Medicaid program to get people covered.

In Ohio, Medicaid pays for half of all medication-assisted treatment for opioid addiction.³³ In addition, **more than 220,000 Ohioans gained access to essential behavioral health and substance use treatment coverage through the Affordable Care Act (ACA),** in large part a result of Medicaid expansion.³⁴ Eliminating Medicaid expansion and further slashing the Medicaid program, as proposed by the BCRA, would potentially disrupt treatment services for hundreds of thousands of Ohioans – many of them in rural counties – who are fighting for their lives.

Ohio Drug Overdose Data by County

Figure 10. Average Age-Adjusted Unintentional Drug Overdose Death Rate Per 100,000 Population, by County, Ohio Residents, 2010-2015^{1,2}

Reduces Funding for Medicare, Threatening Future Beneficiaries

Despite President Trump's promise to not touch Medicare, **the BCRA cuts nearly \$59 billion from the Medicare Trust Fund** over the next decade, jeopardizing the Medicare program for current and future beneficiaries.²³ The BCRA could also cause an **increase in Medicare Part B premiums for the more than 2 million Ohioans (18 percent of the state's population) who rely on Medicare** for their health insurance).²³

Conclusions

Ohio's rural communities are strong and innovative. The insured rate across the state is at its lowest point in history, and rural hospitals in Ohio are doing better thanks to Medicaid expansion than their counterparts in other states.³⁵ However, the damage to health care, jobs, and economic activity caused by the Better Care Reconciliation Act would devastate 50 rural counties across Ohio beyond repair. Washington politicians with taxpayer funded healthcare should be focused on policies that work for rural Ohio – not wasting their time crafting legislation behind closed doors. Republicans should abandon the BCRA and work with Democrats on bipartisan legislation to protect Medicaid, expand affordable health care for Ohioans and all Americans, and build policies that promote good-paying jobs and economic prosperity.
